Mobile & Frontend Engineer

Company: dAIs Genie (Product: miiGenie app)
Location: Southampton, UK (Hybrid) or Vietnam (Remote)
Type: Full-time or Part-time (minimum 25 hours/week)
Website: www.miigenie.com

About Us

dAIs Genie is an early-stage UK startup building miiGenie, an AI-integrated eldercare platform that helps older adults and their families stay connected through voice AI, smart reminders, and practical support tools. We are building for the UK market and focusing on simple, accessible experiences for both older users and caregivers.

We have built our MVP and are now testing it with an early user group, so this role in the Founding team is for someone who can take ownership of the mobile Flutter app and frontend experience, and help shape the product into a polished, reliable, and user-friendly platform.

Your Mission

As the Mobile & Frontend Engineer, you will own the main Flutter mobile app and the frontend experience across the product. You will be responsible for turning design into a high-quality app, building accessible user journeys, and helping the team deliver a smooth experience for both older adults and caregivers.

We value clarity, speed, and practical execution:

> ***"build something people want, learn fast, and keep improving".***

What You'll Do

❖ Develop the mobile app

- Develop and polish the cross-platform mobile app for iOS and Android using Flutter.
- Implement UI for two user groups: elderly users with accessibility-first design, and caregivers with a modern, compact experience.
- Integrate voice AI features (recording, playback, conversation UI)
- Build push notifications, QR scanning, and deep links.
- Improve performance and prepare releases for App Store and Google Play.

❖ Own the frontend experience

- Develop and maintain the admin website using SvelteKit and TailwindCSS.
- Support internal tools, content management, and operational workflows.
- Collaborate with product and engineering to keep the web experience clean, fast, and maintainable.
- Make sure the frontend experience is consistent across app and web.

❖ Work closely with the team

- Translate design specs into polished, pixel-perfect interfaces.
- Collaborate with backend, product, and design teammates to deliver features smoothly.
- Contribute to testing, bug fixing, and iteration based on user feedback.

About You

- 2+ years of Flutter — have shipped apps to the App Store + Google Play
- Proficiency in Dart and a strong understanding of the Flutter widget lifecycle.
- Experience with state management such as Riverpod, Bloc, or equivalent.
- Knowledge of TypeScript and a web framework such as Svelte or React.
- Understanding of REST API integration (error handling, token refresh)
- Good eye for design and ability to implement pixel-perfect UIs from design specs

❖ Nice to have

- Experience with audio recording and playback in Flutter.
- Previously built apps for elderly users, or accessibility-focused experiences.
- Experience with FCM push notifications.
- Knowledge of SvelteKit, TailwindCSS and Playwright.
- Experience with CodeMagic, GitHub Actions

Why Join Us

- Build a product with real impact for older adults and families.
- Join an early-stage UK startup with stock options and high ownership.
- Compensation is negotiable based on experience and ability
- Work with a clean codebase and clear conventions.
- Be part of a small team with low politics and fast shipping.
- Help shape the product during a critical growth stage.

How to Apply
